Official answer

- "Don't do it"

Unofficial answer

- It works
- Our oldest time series are 1.5 years old

How? (for 1.x)

- You need lots of disk space
- Putting SSDs in front of spinning rust is fine
- You need RAM according to what queries you run
- If you do something really stupid, you can kill Prometheus 1.x with expensive queries
- Set your retention accordingly

How? (for 2.x)

- You're already done
